DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-11, 20-24, and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown.

Brown shows a nasal dispensing nozzle used with a discharge pump having a discharge outlet 111, the nozzle comprising a body 100 defining a fluid flow channel 126, an inlet port 12 to the channel, the inlet port shaped for receipt of the discharge outlet 111, and an outlet port 112 defining an outlet as recited, the outlet port shaped for insertion into the nasal cavity of a user, wherein a screw thread path provided by member 130 is provided to the channel between the inlet and the outlet to impart an angular momentum to the medicament. The device also has a reversible stopper 134 as recited in claim 20.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 14-17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown.

Brown also discloses the body 100 defining a generally cylindrical channel which receives a cylindrical insert 122. Brown does not disclose the screw thread mating arrangement, however, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided a screw thread mating arrangement since such arrangements are well known in the art. Making the screw thread path decreasing in cross-sectional area as recited in claim 15 would have been a matter of design choice since such a modification would have involved a mere change in the size of a component which is generally recognized as being within the level of ordinary skill in the art. The limitations of claims 16, 17, and 19 would also have been matters of design choice.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Beard and Breunsbach are pertinent to Applicant's invention.
6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davis D. Hwu whose telephone number is 571-272-4904.
